

PRACTICAL NO 13

AIM: Identifying and handling duplicates using distinct() (R studio).

OUTPUT:

The screenshot displays the R Studio interface with the following components:

- Source Editor:** Contains R code for loading the 'dplyr' library, reading a CSV file named 'meets.csv', and printing the first 10 rows of the resulting 'meets_df' data frame. The code is as follows:

```
> library(dplyr)
>
> # 1. SETUP: Import Dataset with Intentional Duplicates
> meets_df <- read.csv("meets.csv")
> print("--- 1. original Dataset ---")
[1] "--- 1. original Dataset ---"
> print(meets_df)
```
- Environment Pane:** Lists the objects in the global environment, including 'Diabetes_Prediction', 'iris', 'iris_clean', 'long_df', 'meets', 'meets_df', 'risk_pivot', 'survey', 'survey_clean', and 'survey_df'. Each object is accompanied by its dimensions (observations and variables).
- Files Pane:** Shows the file explorer for the project directory, listing files such as 'ABHISHEK DINESH SINGH.Rproj', 'Diabetes_Prediction.csv', 'meets.csv', 'PRACTICAL 11.R', 'PRACTICAL NO 12.R', 'PRACTICAL NO 13.R', 'S116 ABHISHEK DINESH SINGH PRACTICAL NO 11.pdf', 'S116 ABHISHEK DINESH SINGH PRACTICAL NO 12.pdf', and 'survey.csv'.
- Console:** Displays the output of the R code, showing the first 10 rows of the 'meets_df' data frame. The data includes columns for MeetID, MeetPath, Federation, Date, MeetCountry, MeetState, and MeetTown.
