Data Analysis with SAS / SPSS / R

PRACTICAL NO 3 MODULE 2

AIM: Creating cross-tabulations and two-way tables using table ()

OUTPUT:

The screenshot displays the RStudio interface with the following components:

- Console:** Shows R code for loading a dataset, selecting categorical columns, and creating a cross-tabulation. The output is a table with 5 rows (cities) and 5 columns (payment methods).
- Environment:** Lists loaded objects including 'airline_flight_d', 'before_after_mar...', 'campaign_df', 'cat_cols', 'df', and 'uber_driver_trip...'. The 'campaign_counts' object is highlighted, showing its structure as a table with 1 row and 1 column.
- Files:** Shows the file explorer with various files and folders, including 'PRACTICAL NO 7.R', 'PRACTICAL NO 8.R', 'PRACTICAL NO 9.R', 'PRACTICAL NO 10.R', 'Processed_Global_Mobile_Prices.csv', 'SALARY.xlsx', 'synthetic_freelance_jobs.csv', 'WhatsApp Image 2025-11-30 at 13:41:44_0156d8c0.jpg', 'WhatsApp Image 2025-11-30 at 13:41:46_6541518e.jpg', 'WhatsApp Image 2025-11-30 at 13:41:47_401b4e63.jpg', 'airline_flight_delay_analysis.csv', 'PRACTICAL NO 1 M 2.R', 'PRACTICAL NO 2 M 2.R', 'before_after_marketing_campaign.csv', 'PRACTICAL NO 3 M 2.R', and 'uber_driver_trip_analysis.csv'.
