Data Analysis with SAS / SPSS / R

PRACTICAL NO 15 MODULE 2

AIM: Exporting results into external files (Excel, CSV, PDF) using `write.csv()` and `writexl (R)`.

Output:

```
1 Call:
2 glm(Formula = Buy ~ Close, family = binomial, data = stock)
3
4 Coefficients:
5             Estimate Std. Error z value Pr(>|z|)
6 (Intercept)  2.205e+00  1.278e-01  17.25  <2e-16 ***
7 Close       2.216e-08  1.523e-04   0.00      1
8 ---
9 Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
10
11 (Dispersion parameter for binomial family taken to be 1)
12
13 Null deviance: 1941.7  on 2999 degrees of freedom
14 Residual deviance: 1941.7  on 2998 degrees of freedom
15 AIC: 1945.7
16
17 Number of Fisher Scoring iterations: 4
18
19
20
```

```
> write.xlsx(stock, "stock_output.xlsx")
> stock$Buy <- ifelse(stock$Volume > 1000000, 1, 0)
> model1 <- glm(Buy ~ Close, data = stock, family = binomial)
> sink("logistic_model_output.txt")
> summary(model1)
> sink()
> library(readxl)
> stock_output <- read_excel("stock_output.xlsx")
> view(stock_output)
> library(readr)
> stock_output <- read_csv("stock_output.csv")

Data Analysis with SAS / SPSS / R

The screenshot displays the RStudio environment with the following components:

- Environment Panel:** Shows the 'Global Environment' with three objects: 'model1' (Large glm (30 elements, 2.1 MB)), 'stock' (3000 obs. of 10 variables), and 'stock_output' (3000 obs. of 9 variables).
- Files Panel:** Lists files in the 'C:\Users\as993\DATA SET' directory, including 'PRACTICAL NO 13 M2.R', 'PRACTICAL NO 14 M2.R', 'PRACTICAL NO 15 M2.R', 'stock_market_dataset.csv', 'stock_output.csv', 'stock_output.xlsx', 'logistic_model_output.txt', and '\$stock_output.xlsx'.
- Console:** Contains the following R code and output:

```
> write.xlsx(stock, "stock_output.xlsx")
>
> stock$buy <- ifelse(stock$volume > 1000000, 1, 0)
>
> model1 <- glm(buy ~ Close, data = stock, family = binomial)
>
> sink("logistic_model_output.txt")
> summary(model1)
> sink()
> library(readxl)
> stock_output <- read_excel("stock_output.xlsx")
> View(stock_output)
> library(readr)
> stock_output <- read_csv("stock_output.csv")
Rows: 3000 Columns: 9
— Column specification
```
- Data Table:** A table with 13 rows and 9 columns: Date, Company, Open, High, Low, Close, Volume, Market_Sentiment, and News_Impact. The data includes entries for Apple, Tesla, Amazon, and Google from January 2015 to January 2016.
